

The BUITEMS Sub Campus, Muslim Bagh, is located in Qilla Saif Ullah and is directed by Babrak Ali Panezai. It is a purpose-driven campus designed to produce future leaders who are adept at shaping tomorrow, focusing on training students to be agents of change and innovation with a futuristic approach. The campus heavily emphasizes sustainable development, noting that good governance and best practices are key. It encourages faculty and students to become active advocates for sustainability through research, community engagement, and daily practices.

In the post-COVID-19 era, the administration is committed to upgrading the institute's infrastructure and academic delivery system with the latest technological equipment to compete in emerging markets. The core values of the institution include ethical decision-making, professional conduct, holistic stakeholder involvement, and knowledge competition.

Academically, the campus currently offers undergraduate programs in Computer Science under the Faculty of Information and Communication Technology, as well as Management Sciences, Economics, and Public Administration under the Faculty of Management Sciences. Furthermore, the campus boasts faculty from diverse fields with global academic achievements who are dedicated to providing a high-quality, sustainable educational environment.

The BUITEMS Sub Campus, known as the University College of Zhob, or UCoZ, is directed by Dr. Abdul Salam Lodhi. Classes at this campus officially commenced on April 10, 2018. The primary objective of the campus is to provide quality education to the students of Zhob and its adjoining, less-developed areas, aiming to reduce poverty and inequality while improving socio-economic development. The development strategy for the campus outlines a progression in two stages, where the first stage started by providing education in a temporary building with essential facilities, and the second stage involves transitioning to a permanent campus equipped with necessary infrastructure and allied facilities. The core philosophy of the institution focuses on human capital formation, research, and the creation of problem-solving knowledge, with the goal of transforming youth into human capital to catch up with developed nations and contribute to the region's socio-economic uplift. Currently, the University College of Zhob offers several undergraduate programs, including BS Education under the Faculty of Social Sciences and Humanities, BS Computer Science under the Faculty of Information and Communication Technology, and both BS Business Administration and BS Economics under the Faculty of Management Sciences. Additionally, the campus features a diverse faculty with global academic achievements, and detailed faculty profiles are maintained in the university's central directory to guide students.
